

```
import numpy as np

# Sample pixel values
pixels = np.array([0, 50, 100, 150, 200, 255])

# Negative transformation
negative = 255 - pixels

print("Original pixels:", pixels)
print("Negative pixels:", negative)
```

```
Original pixels: [  0  50 100 150 200 255]
Negative pixels: [255 205 155 105  55   0]
```
